Flood Research Paper Outline

The overwhelming amount of evidence illustrates the proof of the Genesis flood happened globally

I. Introduction

- A. Did you know that the flood described in Genesis formed the Grand Canyon?
- B. The overwhelming amount of evidence illustrates the proof of the Genesis flood happened globally
- C. This paper will analyze three facts that prove the existence of a global event which covered the whole earth in water.

II. First Body Paragraph

- A. Long Distance transportation of rock sediments is a major piece of evidence which shows the flooding has occurred worldwide.

- B. Sediments that, have been transported for long distances, then deposited in large quantities is caused by a vast amount of turning water. This amount of water would result in a flood so immense that, the flood in Genesis would be large enough to have such movement in sediments.
- C. One of the most obvious examples of sediments being transported and deposited is the 375 feet thick layers of Coconino Sandstone, seen in the Grand Canyon,
- D. There are areas of long-distance transportation that stretches across an entire country.

III. Second Body Paragraph

- A. Bends in the strata have been found without fractures in the layers which shows that the rock was bent while still playable.
- B. This means that the rock was over saturated with water when the new layer of strata was deposited on top.
- C. This deposition of overlying strata would have to occur in a short period of time because the sedimentary rocks do not retain water for extended period of time
- D. At an area in the Grand Canyon, the strata have been bent sharply into a right angle which reveals that a great flood did occur around the world.

IV. Third Body Paragraph

- A. A key fact to the flood in seen in the first book of the Bible is the discovery of marine organisms in mountainous regions.

- B. The finding of marine fossils in areas such as the Himalayas shows that water covered the earth then rapidly receded covering the trapped organisms in sediments.
- C. The fossils found above sea level are clams, coral, trilobites, fish teeth, and many other organisms which were transported by vast amounts of churning water.
- D. From the existence of marine organisms in the walls of the Grand Canyon, we can learn that the earth was flooded by God in Genesis

V. Conclusion

- A. Based on the evidence that long-distance transportation of sediments, strata folding without fracturing, and marine fossils above sea level, only are accomplished by a tremendous amount of water flooding the earth.
- B. This evidence proves that the Genesis flood was a global event
- C. The flood in Genesis is an undeniable part of our earth's history which changed her geography in dramatic ways.
